Project Title: Impacts of Flooding on Population Growth Changes and Migration in Malabon City

Project Proponent: Karen Ann B. Jago-on, PhD

Designation of Proponent: 

Department and College of Proponent: School of Urban and Regional Planning

Project Abstract:

This study will analyze the impacts of floods on the population of Malabon City, particularly on the decisions of people to migrate from the regular place of residence, due to these flooding events and related effects. The methodology would involve historical analysis of population changes and migration patterns in the city, descriptive analysis of flood coping mechanisms, survey of abandoned homes, and case studies of actual experiences of people who migrated from the city due to floods. The decisions of people can be forced or voluntarily, and movement from the city can be seasonal, temporary or permanent. Results of this study can contribute to the limited empirical research on the relationship of environmental changes, such as flooding events on migration and relocation. These will also aid local government in planning better solutions to the flooding problems in the area.

Funding Support in Philippine Pesos: 300,000.00

Duration and Status: 24 months
